Mind your own business - from anywhere in the world.

All you need is a network camera attached to the internet and an Internet connection.

WHEREVER YOU HAPPEN TO BE – ACROSS TOWN OR ANYWHERE IN THE WORLD – WITH NETCAM WATCHER YOU CAN HAVE 24/7 MONITORING OF THE STATE OF YOUR BUSINESS, HOME OR PROPERTY FROM YOUR PC.

Netcam Watcher at work…

Getting home, business or property security protection is simple.

At school – use the school's existing network (totally unused at night) to monitor school premises for vandalism and general security.
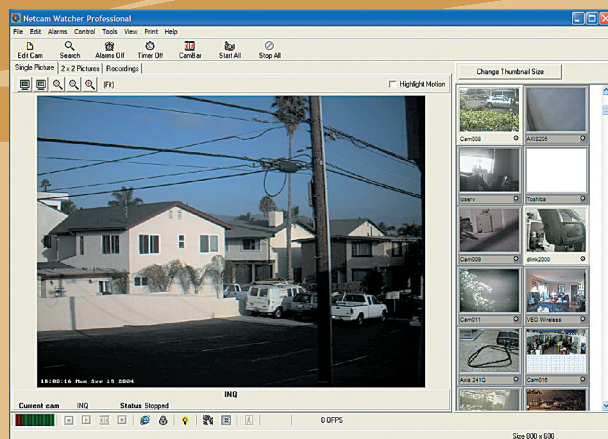

On a building site - take snapshots and keep track of progress over the life of the project. At night, switch from monitor to motion detect and alarm, providing on the spot security.

In a factory - receive an alert if anything falls out of line on conveyor belts; use masking to monitor only those areas where nothing should be moving.

"Our store got robbed today...armed robbery. Fortunately the software was running and recording. The camera system nailed the guy head on. Your software came through. Thank you very… very much." Howard M., Indiana, US.

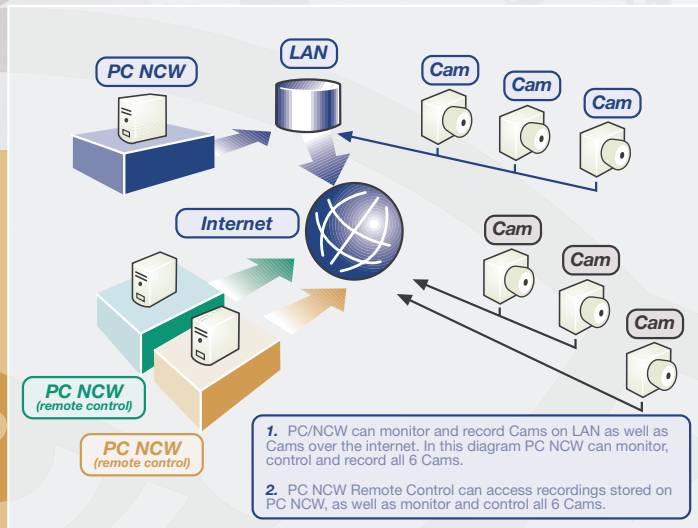

While one camera is selected for viewing in the main screen all other cameras are viewable as thumbnails.

PC NCW
(remote control)

1. PC/NCW can monitor and record Cams on LAN as well as Cams over the internet. In this diagram PC NCW can monitor, control and record all 6 Cams.

2. PC NCW Remote Control can access recordings stored on PC NCW, as well as monitor and control all 6 Cams.

Netcam Watcher gives you control over your security

- Record only actions and events rather than endless empty frames
- Keep an eye on as many cameras as you like on a single screen
- Keep false alarms to a minimum by monitoring only areas of the image where no movements are expected
- Automatically switch from monitoring to motion detection and alarms according to a pre-set schedule
- Automatically receive an email alert (and even an image) when an event occurs
- Record multiple streaming cameras all at once
- Instantly jump to view a motion event simply by double-clicking on search results
- Pan/Tilt/Zoom the network camera from your desktop

- Use image enhancer to improve poor quality or low light conditions

Better than video

- Uses industry standard computer cabling and the Internet
- Easy growth from one camera to many (including multiple camera types)
- Better security using remote storage
- More flexible and greater functionality
- View, record and control net cameras from anywhere on the planet using Remote Control module and Internet connection
- Choose independent power source and wireless transmission if you need it
